Educational Background

University of Waterloo

09/2025 - 12/2026

Master of Engineering in Electrical and Computer Engineering (Software Engineering)

Yanshan University

09/2021 - 06/2025

Bachelor of Electronic Science and Technology, GPA: 86/100

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, HTML/CSS, Java, Kotlin, C/C++
- **Frameworks:** React Native, Flutter, Node.js/Express, Django, Spring Boot
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & Tools:** Git, Docker, Microsoft Azure, Linux, Bash, REST APIs

PROFESSIONAL EXPERIENCE

IPMD, Inc.

05/2026 - 08/2026

Technical Manager Intern

California, United States - Remote

- Led 6 cross-functional workstreams across frontend, backend, AI/ML, design, and product, translating product requirements into technical priorities, coordinating development milestones, and driving the Image Cards to Fine Arts MVP from planning through integration and delivery.
- Developed and deployed an AI-powered image generation platform on Microsoft Azure using React, TypeScript, Node.js/Express, Qwen/Gemini, and Stable Diffusion 1.5, transforming artistic card selections, text, and uploaded images into optimized prompts and generated artwork.
- Managed end-to-end system integration and release readiness, coordinating Dockerized frontend, backend API, LLM, and Stable Diffusion services while tracking dependencies, resolving cross-team blockers.

FoloBotics

01/2026 - 04/2026

Full-Stack Developer

Ontario, Canada

- Developed full-stack product features across Flutter clients and Kotlin/Spring Boot services for user, task, recommendation, and warehouse workflows, integrating REST APIs across front-end and back-end application layers.
- Designed data flows across PostgreSQL, MySQL, and Redis and optimized API/database interactions, reducing average response time by 25% and improving backend performance.

SELEST Security

09/2025 - 12/2025

Full-Stack Developer

Ontario, Canada

- Built and shipped a multi-role mobile application using React Native, TypeScript, and JavaScript, supporting testing and production releases to the App Store and Google Play through Git-based development workflows.
- Developed 5+ booking and shift-management workflows by integrating Node.js/Express REST APIs with MongoDB, translating operational requirements into reliable end-to-end product functionality.

Harbin Institute of Technology Robot Technology Research Institute

06/2025 - 08/2025

Industrial Vision Platform Development Intern

China

- Developed a real-time C++/Qt application on Linux that processed up to 600 images per second from live camera feeds, debugging performance-sensitive behavior and integrating application components.
- Built a Python/Django REST back end for detection logging, parameter synchronization, and offline frame analysis, connecting services through structured APIs.

Sinopec Group

07/2024 - 08/2024

Application Intern at the Information Center

China

- Integrated and tested software components for an unmanned warehouse digital storage system and Robot Control System (RCS), supporting application and automation workflows.
- Implemented QR/2D-code recognition in Python with Pyzbar and integrated scan results with back-end services for reliable warehouse operations.

Additional Information

Languages: English (fluent), Chinese (native), French (sufficient)
